EAM 1: Display Equipment

Exercise Display an equipment. **Time** 10 min

Task Use the SAP Fiori Launchpad to display the equipment.

Technical objects are managed in the master data of the SAP system as equipment and functional locations. The term **equipment** refers to a physical object that is managed and maintained as an individual item. Equipment can include machines, vehicles, devices, tools, or other plant components that are important for the operation of a company.

Equipment is usually assigned to a functional location, which itself has an immobile character (such as a power plant, roads, pipeline systems, etc.).

Equipment

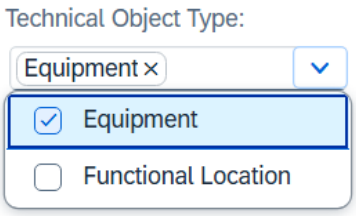

To display an Equipment, go to the space *Enterprise Asset Management* in the role of *Production Manager* use the app *Find Technical Object*.

Start

In the *Technical Object* view, select **Equipment** as the *type of technical object*.

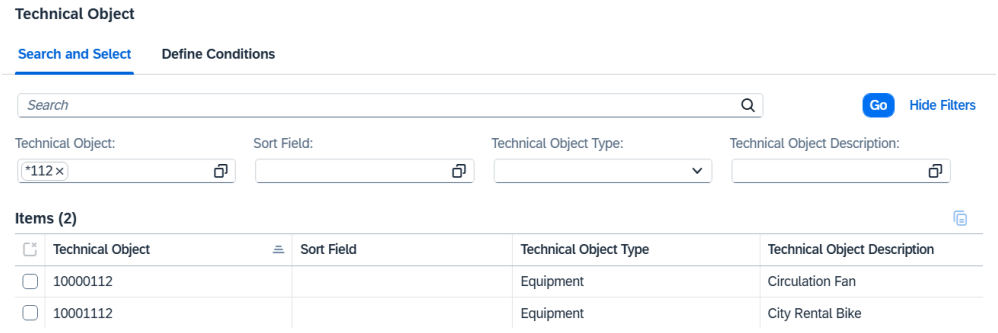

Equipment

Use the value help icon in the *Technical Object* field to select a technical object (Equipment).

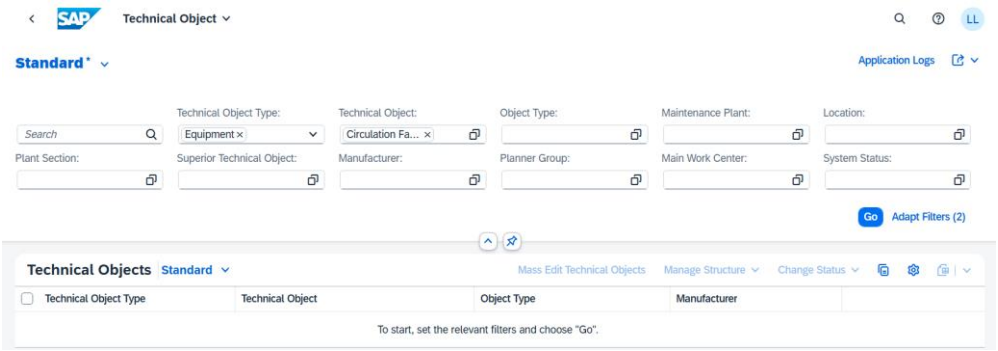

Enter *### as the *technical object.* Click on Go.

*###

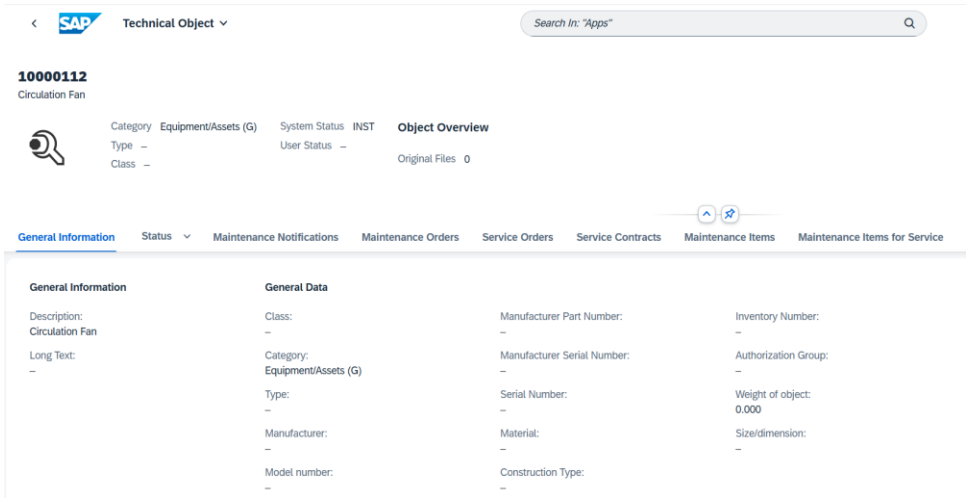

Select the line with the equipment name **Circulation Fan** and click on OK to choose this equipment.

Circulation Fan

Click on Go to display the technical object (equipment).

Click on the equipment row to view detailed information. In the *General Information* tab, you can now see detailed information about your equipment.

Find out the status of the equipment. To do so, click on the *Status* tab.

Status of Equipment:

_____

In which maintenance plant is the Equipment located?

_____

To which work center is the Equipment linked?

_____

Which Functional Location is the superior one?

_____

Then click on the home icon  to return to the Fiori Launchpad overview.

EAM 2: Display Functional Location

Exercise Display a Functional Location. **Time** 5 min

Task Use the SAP Fiori Launchpad to display a Functional Location.

Functional location

The **functional location** is an organizational unit of logistics that structures the objects of a company to be maintained according to functional (e.g., drive unit), process-oriented (e.g., condensation), or spatial (e.g., hall) aspects. A functional location represents the location where a maintenance measure is to be performed.

Start

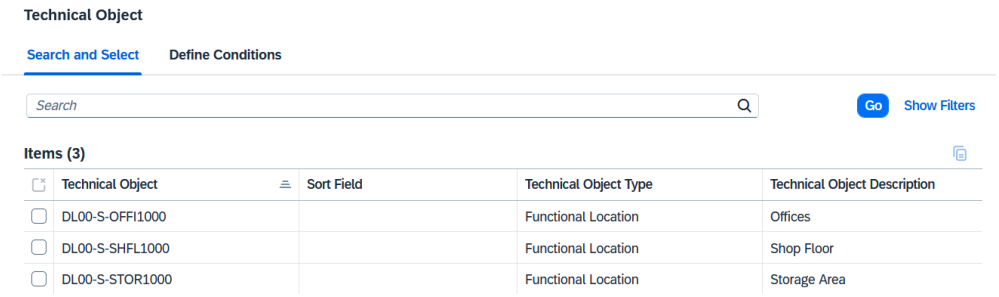

To display a Functional Location, go to the space *Enterprise Asset Management* in the section *Production Manager* use the App *Find Technical Object*.

Functional Location

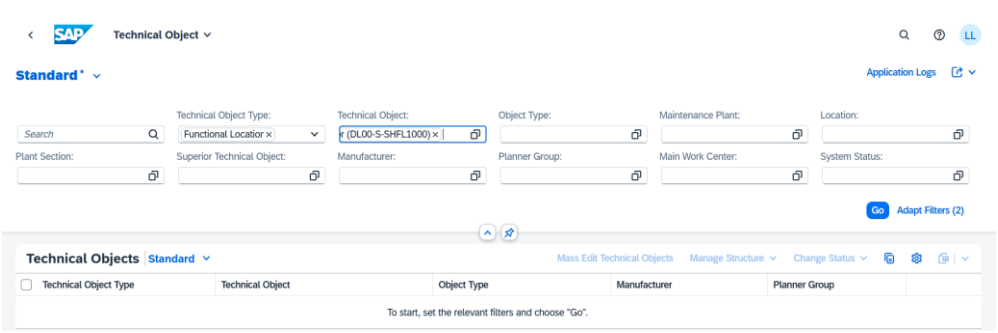

In the *Technical Object* view, select **Functional Location** as the *type of technical object.*

Use the value help icon in the Technical Object field to select a technical object (Functional Location).

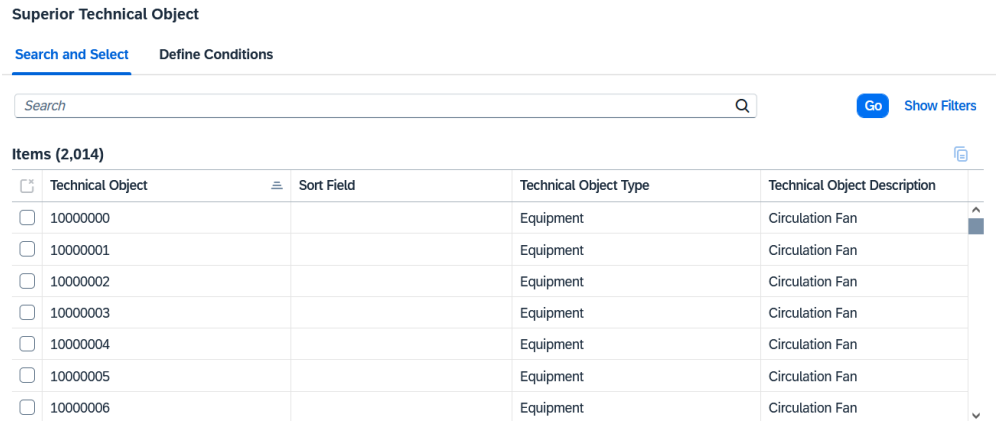

DL00-S-SHFL1000

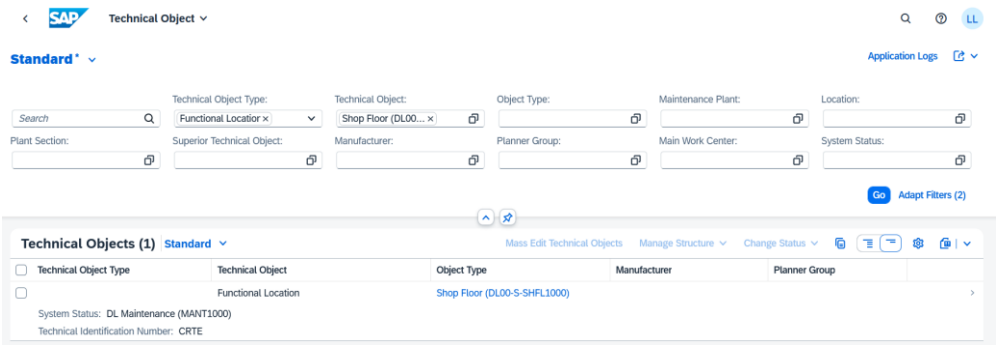

In the *Technical Object* window, select **DL00-S-SHFL1000 (Shop Floor)** as the *Functional Location* and click on OK.

When you click on the value help icon in the *Superior Technical Object* field, you will now see the structure list of the Functional Location (Shop Floor) or the installed equipment that is available in this department.

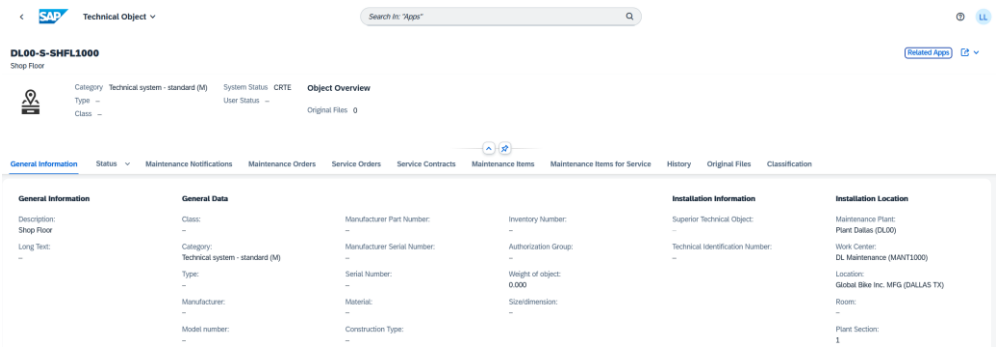

Leave the *Superior Technical Object* field blank and click Go.

Click on the row of the Functional Location to view detailed information.

In the *General Information* tab, you will now see detailed information about your Functional Location.

Click on the home icon to return to the Fiori Launchpad overview.
