Quality Information Record

- If a quality assurance agreement or vendor release is required for a material, a Quality Info. Record must be created
- Determines how a material can be processed further
- when a quotation or purchase order is created, the system checks whether a quality info record is required and available for the combination of material and vendor
- System also checks, whether the vendor and material-vendor combination is blocked or released for quotations, purchase orders and/or goods receipt

Inspection Plan

- Can be created for different uses as model inspection, carrying out an audit, preliminary series inspection, goods receipt inspection, goods issue inspection, inspection of stock transfers, inspections in repetitive manufacturing
- Defines which characteristics are to be inspected in each inspection operation and which test equipment is to be used in the inspection
- Several materials can be assigned to an inspection plan
- Several inspection plans with different inspection operations or inspection characteristics can be created for a material or combination of material, vendor and manufacturer, or material and customer

Inspection Lot

- Request to a plant to inspect a specific quantity of material or one or more pieces of equipment or functional locations
- Documented by an inspection lot record
- Used to record, process and manage information for a quality inspection
- Whenever materials are moved from on place to another under certain conditions, the QM component can automatically create inspection lots
- The system can also create an inspection lot automatically if a delivery is created in the SD component for a inspection-relevant material
- Can be created automatically or manually
