MOTIVATION

The purpose of this assignment is that you become familiar with the quality management in sales and Distribution

PREREQUISITES

Before you use this case study, you should be familiar with navigation in the SAP system.

You should have completed the Navigation exercise and have read the GB Story prior to starting this assignment.

NOTES

This case study uses the Global Bike data set, which has exclusively been created for SAP UA global curricula.

This material was prepared with the assistance of the BSIS 420/620 students at CSU Chico.

Process Overview

Learning Objective Understand and perform a Quality Management Process integrated in an Order-To-Cash Process.

Time 160 min

Scenario While receiving Material, you need to check the quality in order to sell high value goods. You will take on different roles within the Global Bike Inc. to perform a quality inspection on newly arrived goods and complete a Sales and Distribution process with them. You work for example as a warehouse worker, accounting clerk and sales agent. You will get insight in the Sales and Distribution (SD), the Materials Management (MM), the Financial Accounting FI and CO) and the Warehouse Management (WM) departments.

Employees involved
Catherine Dubios (Sales Representative US West)
Ricardo Robles (Warehouse Supervisor)
Sanjay Datar (Warehous Employee)
Juriko Hamada (Good Issue Clerk)
Yoshi Agawa (Goods Receipt Clerk)
Sunil Gupta (Warehouse Employee)
Karl Gruber (Sales Person 2 US West)
Zarah Morello (Good Issue Clerk)
Stephanie Bernard (AR Accountant)

You start the process by creating a new customer (Quality Bikes). They will order Bikes from Global Bike. Beforehand some goods are transferred from Dallas to San Diego. Before leaving the warehouse in Dallas, a quality inspection is performed. Afterwards they are moved to San Diego from where they are sold and sent to your customer.

Step 22: Review Document Flow 51

Step 1: Create New Customer

Task Create a new customer. **Time** 20 min

Short Description Use the SAP Fiori Launchpad to create a new customer.

Name (Position) Catherine Dubios (Sales Representative US West)

In this case study, we will create the master data for a new customer. Two types of customer data are stored about a customer – sales data and accounting data. The customer master data is created in three groups, or views – general, accounting, and sales. Customers can be created centrally, meaning that all views are generated concurrently, or responsibility can be distributed so that different personnel in the accounting and sales areas are responsible for creating and maintaining the data in their respective views. For this exercise, central creation will be used to enter all of the needed data to define a new customer.

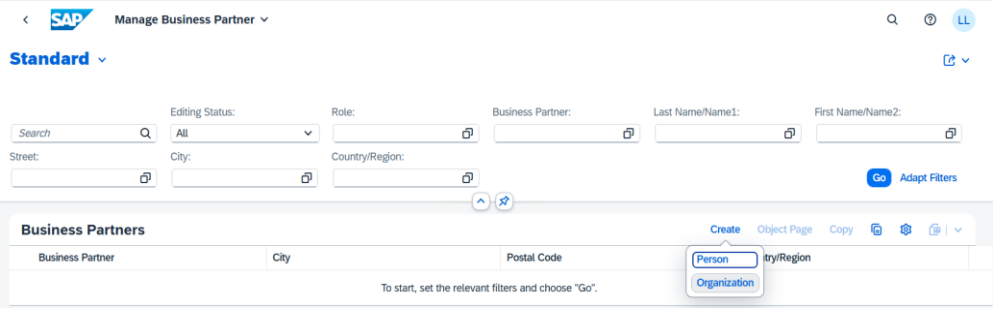

To create a new customer, click in the *Quality Management* area in the role *Sales Representative US West* on the app *Manage Business Partner Master Data*.

Start

On the *Manage Business Partner* screen, select the button Create. A submenu will open. Click **Organization** here.

Organization

Note Business Partners are created at a higher level, i.e., across departments. They can be categorized as either a person or an organization.

Person
A person represents an individual natural person involved in business activities.

Organization
An organization can represent various units:

- Company (e.g., a legal entity)
- Departments, etc. (parts of a legal entity)
- Association.

The term "organization" is used as an umbrella term to cover all situations that can arise in daily business activities.

Roles of Business Partners

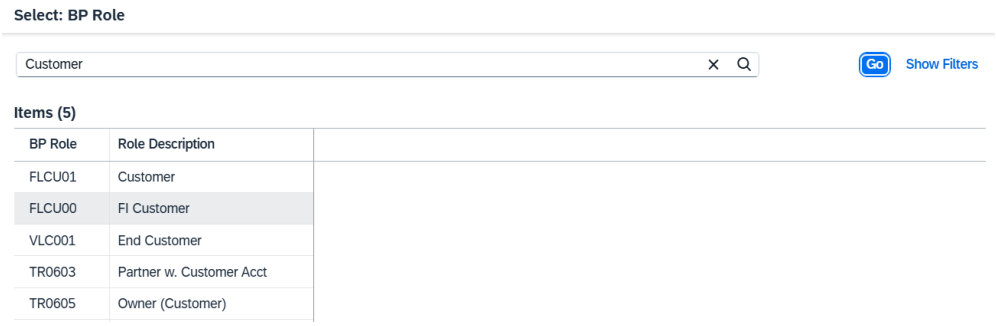

Specific roles are assigned to business partners, such as "Customer" or "Supplier." These roles are defined for specific organizational levels (e.g., company code, sales area).
Below, you will get to know and apply the two SAP standard roles for customers:

- **FLCU00 | Debtor:** This role stores the data for financial accounting.
- **FLCU01 | Customer:** This role stores the sales data.

On the *Create Organization* screen, in the field *BP Role* click the help icon . In the pop-up that opens, search for **Customer** and then select the entry **FLCU00 | FI Customer**.

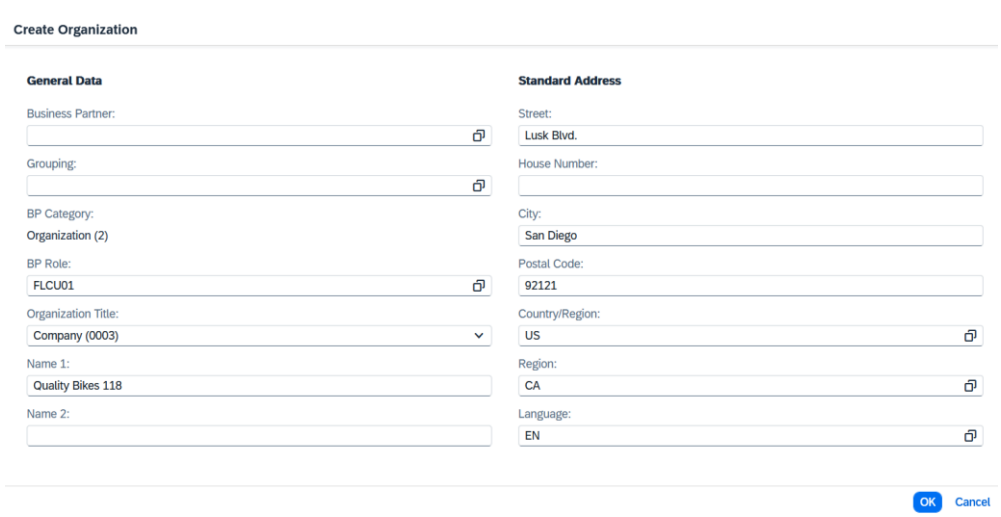

Customer

FLCU00 | FI Customer

Back on the *Create Organization* screen, please add the following information. As *Organization Title* choose **Company (0003)**, and as *Name 1* enter **Quality Bikes ###**. Remember to replace your three-digit number for ###, e.g. if your number is 114, please enter 114. Further, as *Street* enter **Lusk Blvd**. and as *City* enter **San Diego** (with the *Postal Code* **92121**). In the field *Country*, please enter **US**, and choose **CA** as *Region*. Finally, for *Language* select **EN**.

Company (0003)
Quality Bikes ###
Lusk Blvd.
San Diego
92121
US
CA
EN

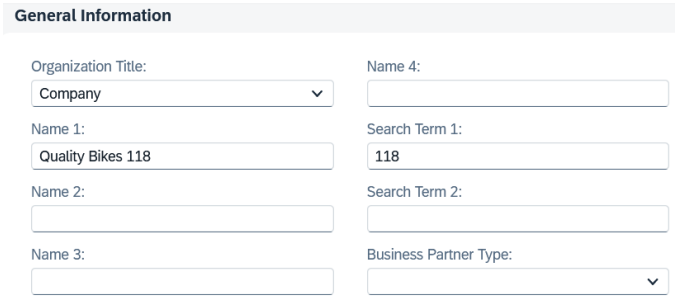

Confirm your entries with OK.

A new overview is generated. Make sure that you have selected the *Basic Data* tab. In the *General Information* area, in the field Search Term 1 add your three-digit number ###.

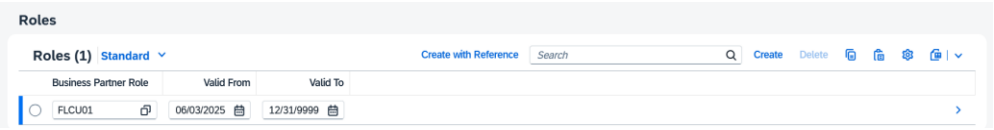

Basic Data

###

Then, select the *Roles* tab. Auto-scroll will take you to the correct position. You will see a line with the details of the business partner role as well as the validity dates.

Roles

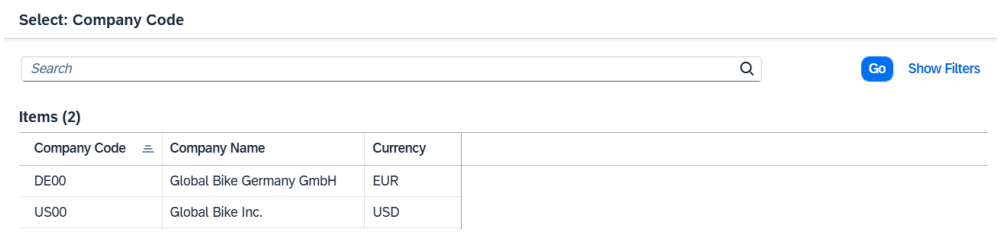

At the end of the line, click › to maintain further details.

A new screen is loading. Select the *Company Codes* tab. Currently, there is no record maintained for the company codes, so please select Create.

Company Codes

In the *Company Code* field, click the input help icon. The following pop-up window opens.

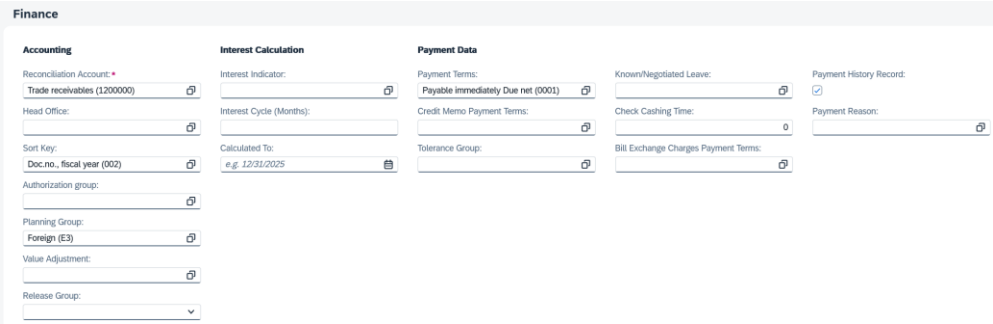

Click on **US00** (*Global Bike Inc.*).

US00

In the *Finance* area, as the *Reconciliation Account* enter **1200000** (*Trade Receivables*) and as the *Sort Key* choose **002** (*Doc.no., fiscal year*). Enter **E3** (Foreign) as *Planning Group*. In the field *Payment Terms*, please add **0001** (*Payable immediately Due net*). Make sure that the **Payment History Record** checkbox is choosen.

1200000
002
E3
0001
Payment History Record

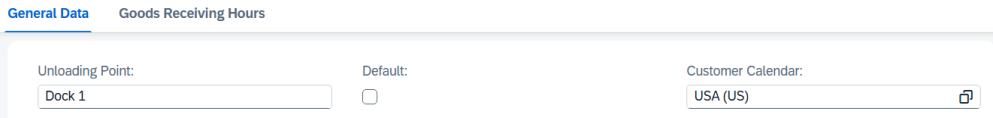

Select Apply to save the draft.

Navigate to the *Unloading Points* tab. Currently no data record is maintained for the unloading point, select the button Create.

Enter **Dock 1** as *Unloading Point* and **US** as *Customer Calender*.

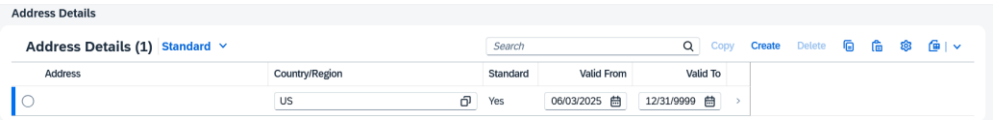

Dock1
US

Select Apply to save the draft. You can save the customer role by clicking Apply once again afterwards.

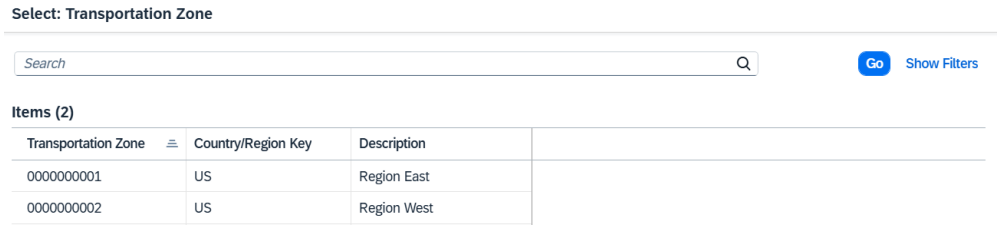

Select the *Address* → *Address Details* tab. You will see one line with the country details as well as the validity dates. Click › to maintain more details.

Address
Address Details

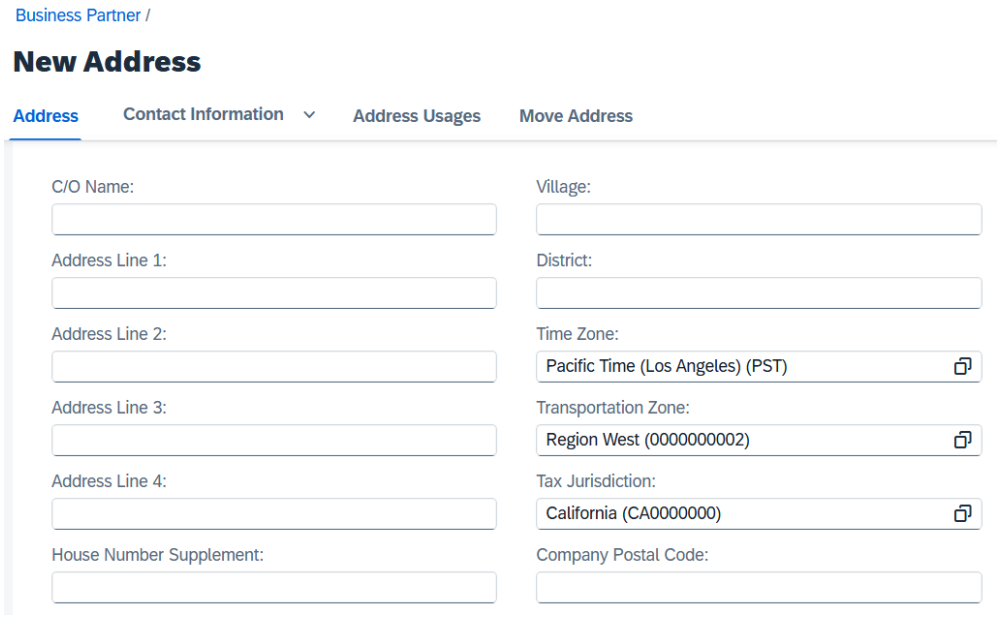

In the *Address* area, you can use the button Show More to display all the fields. Please find the *Transportation Zone* field and click the input help icon ⧉. The following pop-up window will open.

Transportation Zone

Region West
PST
CA0000000

Click on **Region West** to select it. Enter **PST** in the field *Time Zone* and as *Tax Jurisdiction* enter **CA0000000.**

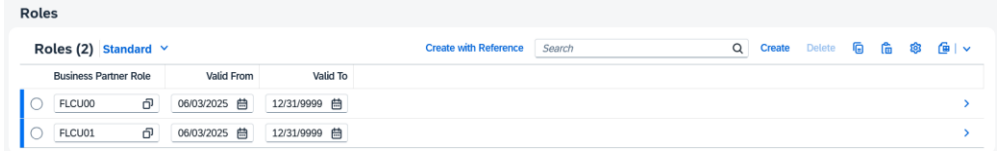

Finally, use the button Apply again to save your draft.

Note In the general role of the business partner (BP), the business partner name and address is entered. The general role data is relevant for sales and distribution and for accounting. To avoid data redundancy, it is stored centrally (client-specific). It is valid for all organizational units within a client.

To be able to add sales area data for the customer you have just created, you have to assign a new business partner role. For this purpose, select the *Roles* tab. There, choose Create again to create a new row for another Business Partner Role.

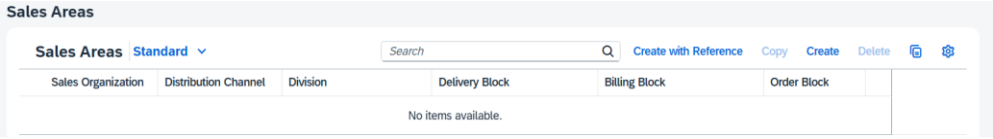

In the empty *Business Partner Role* field, click the input help icon. In the pop-up that opens, search for **Customer** and then select the **FLCU01 | Customer** entry.

Customer
FLCU01 | Customer

At the end of the new row, you can click › to add more details. Select *Sales Areas* tab to maintain the sales area data of your customer. Since no record currently exists, select the button Create.

Sales Areas

In the *Sales Organization* field enter **UW00**, as the *Distribution Channel* enter **WH** (*Wholesale*), and as the *Division* choose **BI** (*Bicycles*). Press enter.

UW00
WH
BI

Next, please select the *Sales Area Details* tab. In the *Sales Orders* area, as *Sales District* enter **US0002** (*Southwest USA*) and make sure that as the *Currency* **USD** is specified.

Sales Area Details

US0002
USD

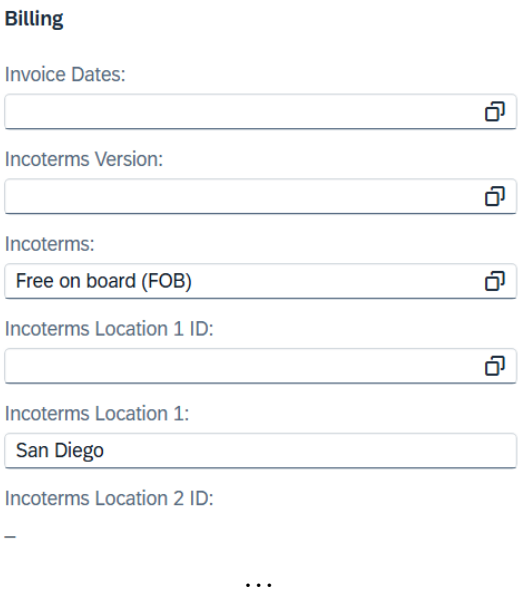

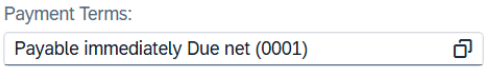

In the *Billing* area, as the *Incoterms* type in **FOB** (*Free on Board*) and as the *Incoterms Location 1* **San Diego**. In the *Payment Terms* field, please add **0001** (*payable immediately due net*).

FOB
San Diego
0001

Note Incoterms (abbreviation for **In**ternational **Co**mmercial **Terms**) are internationally accepted terms of delivery published by the International Chamber of Commerce (ICC) for international commercial law.

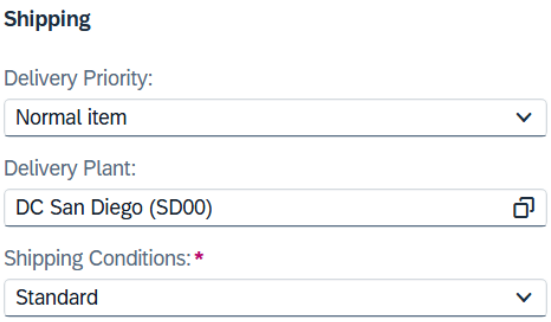

Incoterms

Subsequently, fill in data for the *Shipping* area. In the fields *Delivery Priority* and *Shipping Conditions*, use the drop-down lists to select **Normal item** and **Standard** in chronological order. As the *Delivery Plant* enter **SD00** (*San Diego*).

Normal item
Standard
SD00

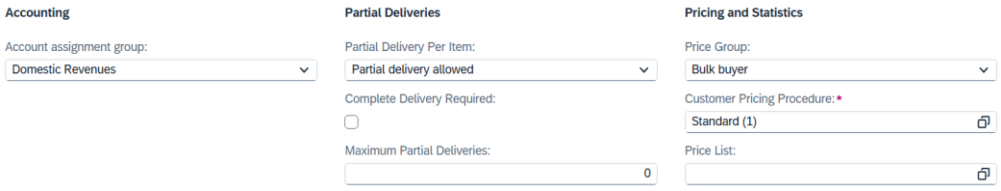

In the *Accounting* area, as the *Account assignment group* select **Domestic Revenue**. In the following *Partial Deliveries* area, in the field *Partial Delivery Per Item*, please use the drop-down list and select **Partial delivery allowed**. Last but not least, enter data for the final area of this tab, *Pricing and Statistics*. In the *Price Group* field, use the drop-down list to select **Bulk buyer** and as the *Customer Pricing Procedure* enter **1** (*Standard*). Compare your entries with the following screenshots and confirm your entries with enter.

Domestic Revenue

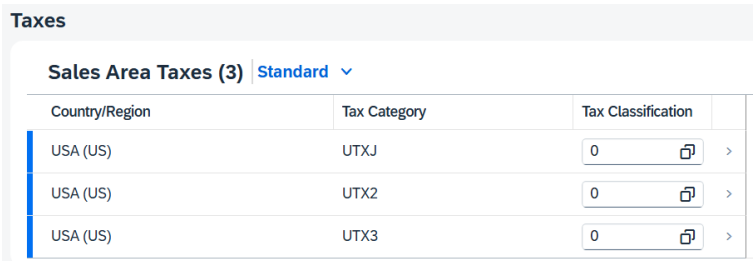

Partial delivery allowed

Bulk Buyer
1

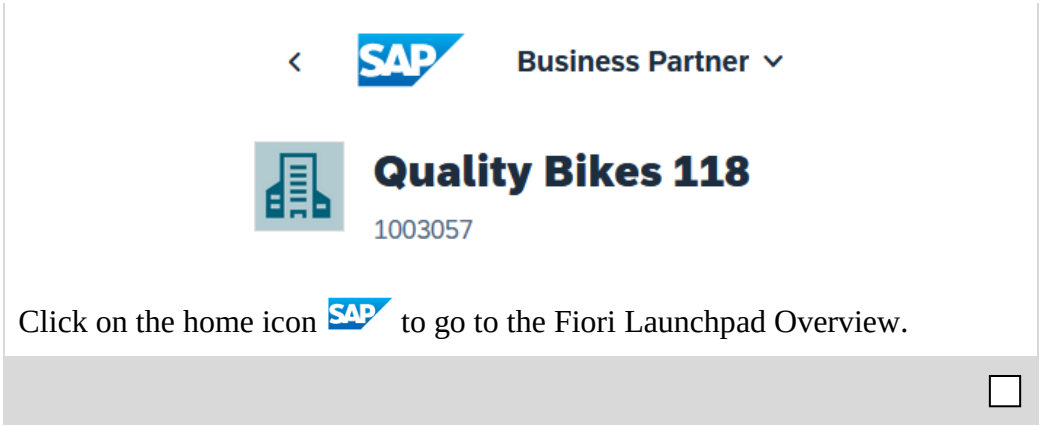

Then, please select the *Taxes* tab. For all three tax categories choose the *Tax Classification* **0** (*Exempt*).

Taxes
0

Select Apply to save your adjustments as a draft. Then press Apply again to finish editing the customer role. To finally save the business partner, use the Create button in the lower screen area.

The SAP system will create the master data record for the new BP and assign a unique business partner number. Write down the BP number, which you can find in the header area.

Click on the home icon to go to the Fiori Launchpad Overview.

Step 2: Extend Material Master with QM View

Task Extend material master with QM view. **Time** 15 min

Short Description Use the SAP Fiori Launchpad to extend a material master record for a Bike to add data for the quality management view.

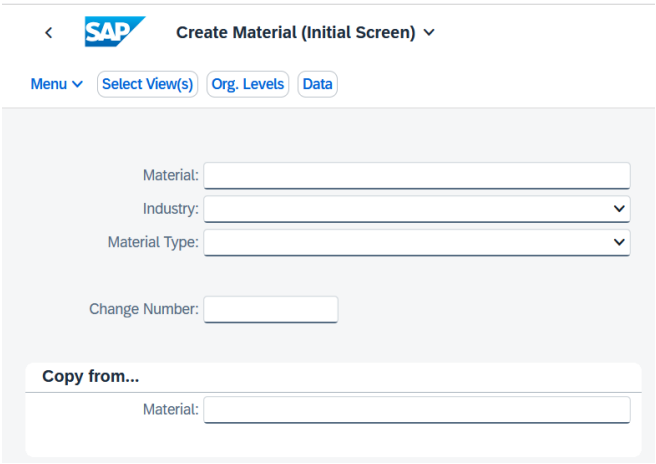

Name (Position) Ricardo Robles (Warehouse Supervisor)

To create a finished good material master record, click in the *Quality Management* area in the role *Warehouse Supervisor* on the app *Create Material*.

Start

This will produce the following screen.

In the *Material field*, type in **ORWN1###** (replace ### with your number) and select **Mechanical Engineering** as an Industry sector.

ORWN1###
Mechanical Engineering

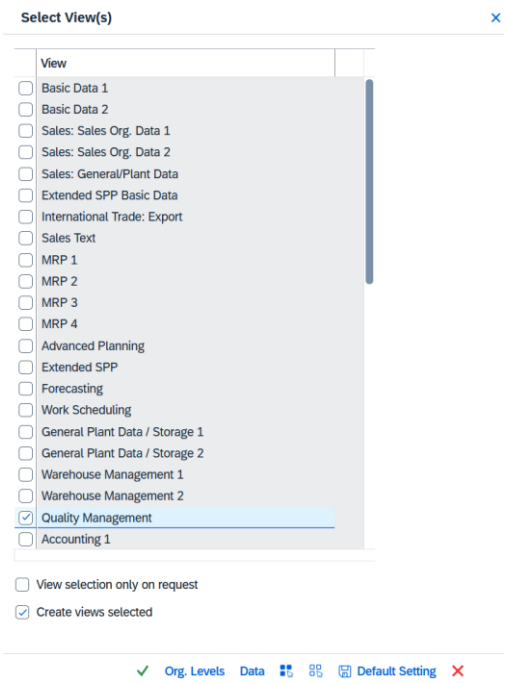

Then, click on Continue to proceed. Confirm any warning message.

On the following popup, select the view **Quality Management** by clicking on the square in front of the row.

Quality Management

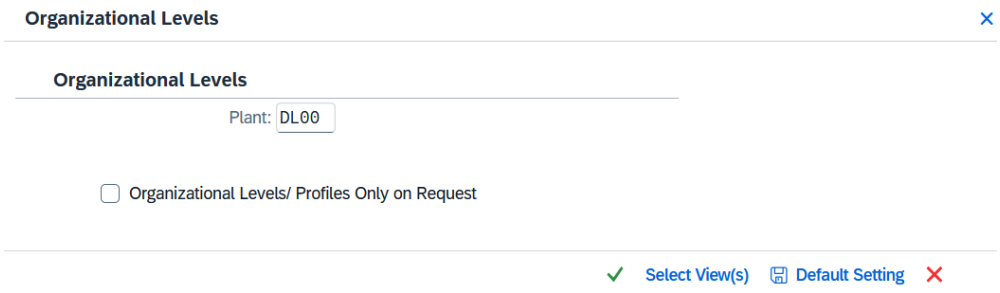

Also, select **Create views selected**. Then, click on ✓.

Create views selected

DL00

On the *Organizational Levels* screen, enter *plant* **DL00** (Dallas). Then, click on ✓.

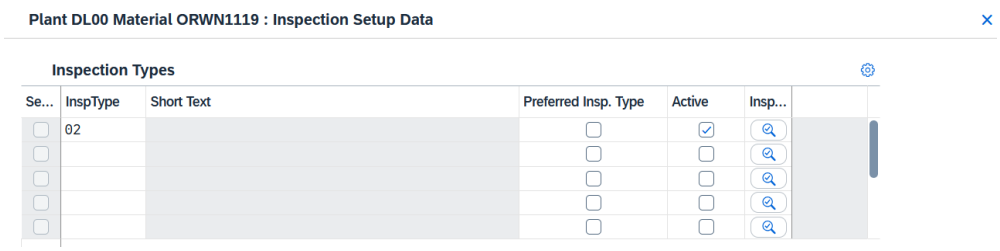

On the *Quality Management* tab select Insp. Setup.

In the *Plant DL00 Material ORWN1### : Inspection Setup Data* screen create a new Inspection Type by clicking on Inspection Types.

Enter Type **02** for *InspType* and mark it as **active**.

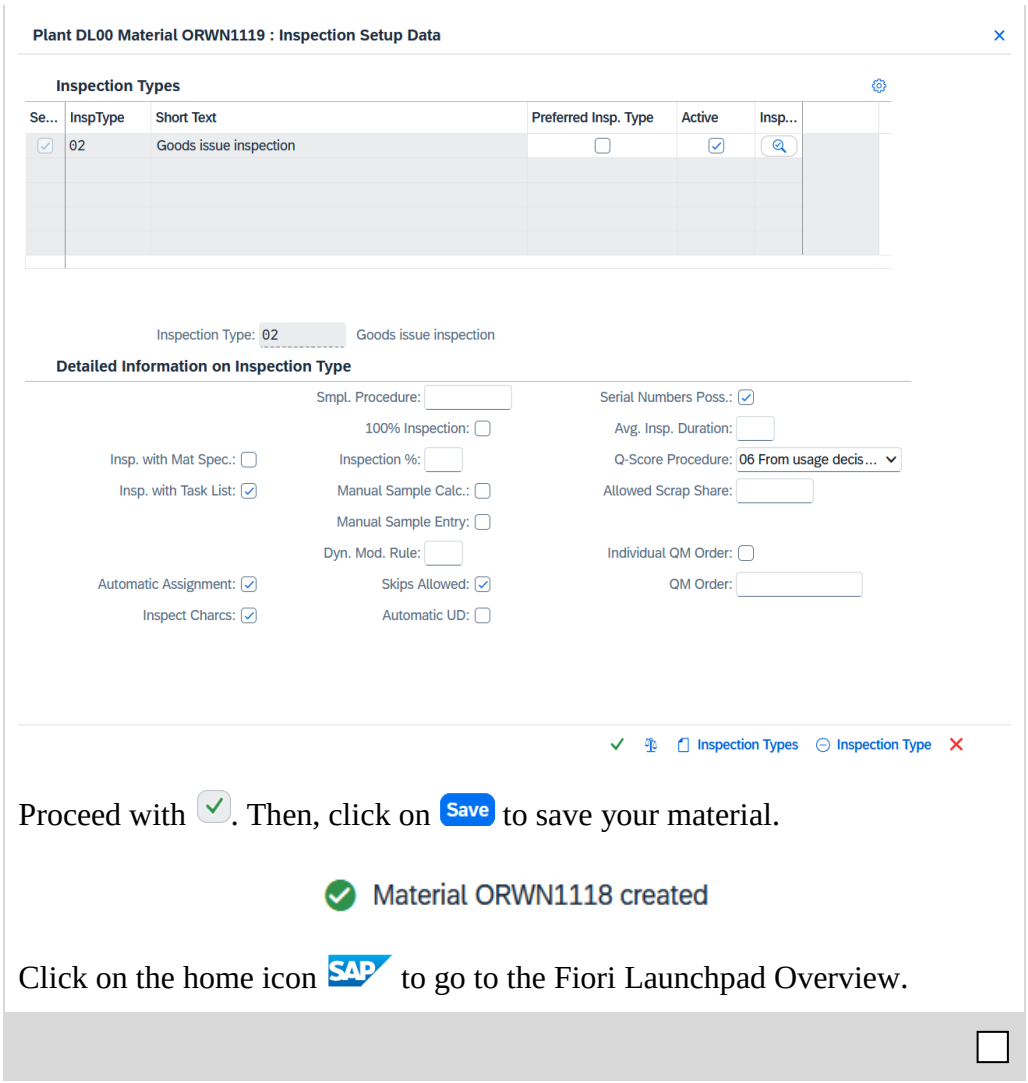

02
Active

Choose ⚖ to check your entries and show detailed information on the inspection type.

In the detailed information uncheck **Automatic UD** and compare the screen with the screenshot below.

Automatic UD - unchecked

Proceed with . Then, click on to save your material.

Click on the home icon to go to the Fiori Launchpad Overview.

Step 3: Create Quality Info Record with Customers

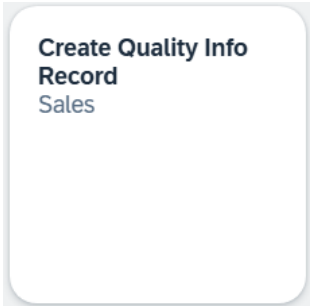

Task Create a quality info record with customers. **Time** 5 min

Short Description In this task, you create a quality information record with the customer.

Name (Position) Ricardo Robles (Warehouse Supervisor)

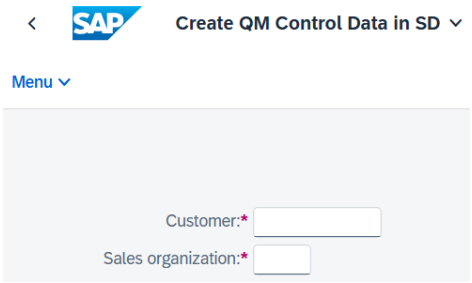

To create a quality info record, click in the *Quality Management* area in the role *Warehouse Supervisor* on the app *Create Quality Info Record – Sales*.

Start

Note If a quality assurance agreement or a vendor release is required for a material, you must create a quality information record (quality info record). The quality info record determines how the material can be processed further.

This will produce the following screen.

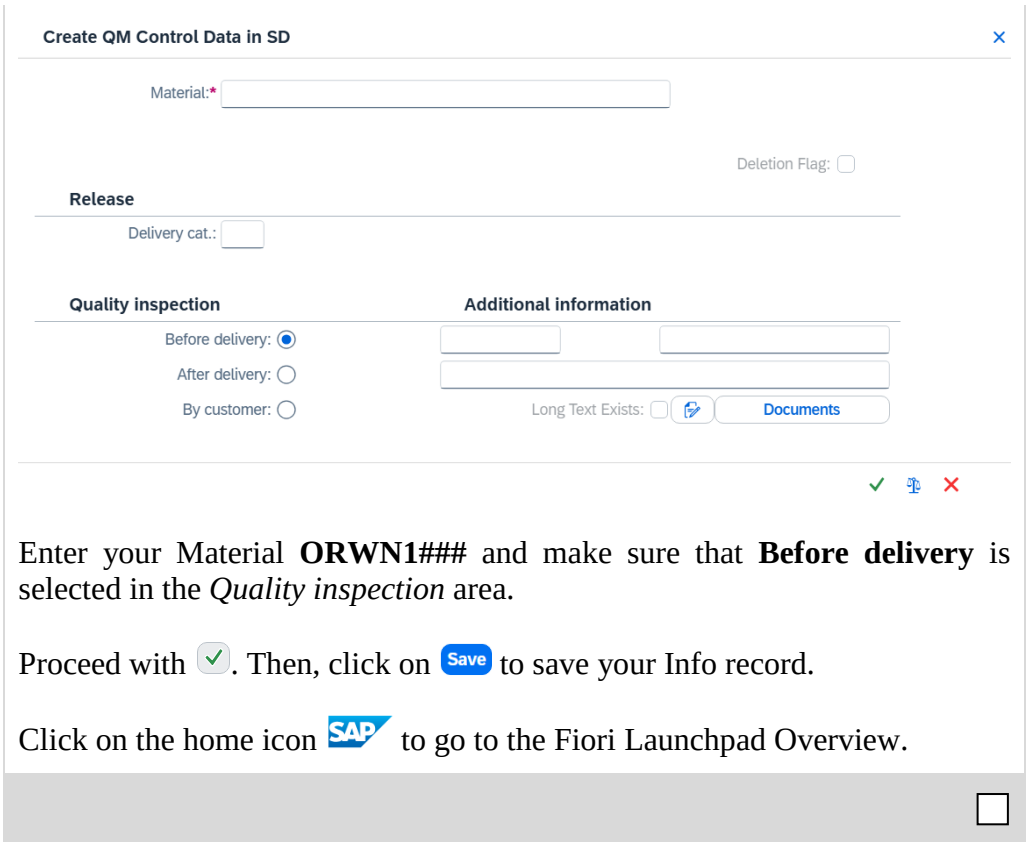

If your customer number is not entered by default, then search for your new customer using the F4 help with search term ###.

###

Enter **UW00** as *Sales Organization* and proceed with *Enter*.

UW00

Click on New Info Record button on the application tool bar. This should produce the following screen:

Enter your Material **ORWN1###** and make sure that **Before delivery** is selected in the *Quality inspection* area.

ORWN1###
Before delivery

Proceed with ✓. Then, click on Save to save your Info record.

Click on the home icon SAP to go to the Fiori Launchpad Overview.

Step 4: Create Inspection Plan

Task Create an inspection plan. **Time** 10 min

Short Description In this task, you create an inspection plan for the material you created.

Name (Position) Ricardo Robles (Warehouse Supervisor)

To create an inspection plan, click in the *Quality Management* area in the role *Warehouse Supervisor* on the app *Manage Inspection Plans*.

Start

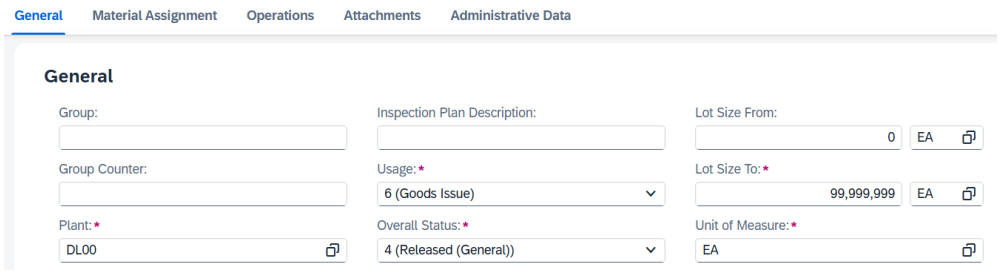

Note With the help of an inspection plan, you describe how a quality inspection of one or more materials should run. In the inspection plan, you specify the order in which certain inspection procedures are carried out and which inspection characteristics are to be checked against which specifications

Click on Create.

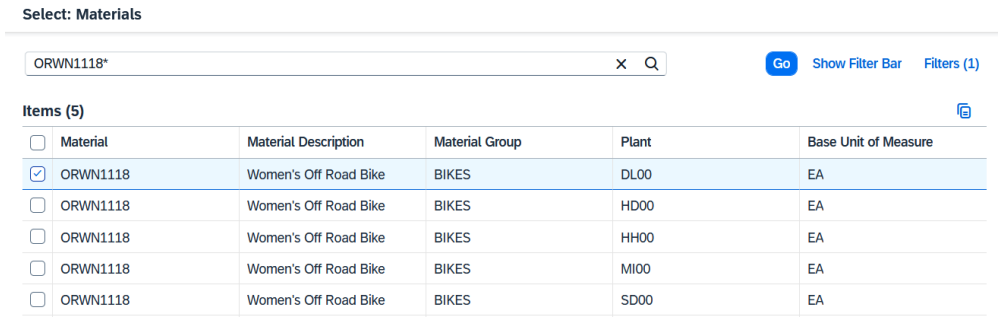

In the *Manage Inspection Plans* view, under the *General* tab, enter **DL00** as the *Plant*, **6** as the *usage*, and **4** as the *overall status*. Additionally, enter **EA** as the *unit of measure*. Compare the entries with the following screen.

DL00
6
4
EA

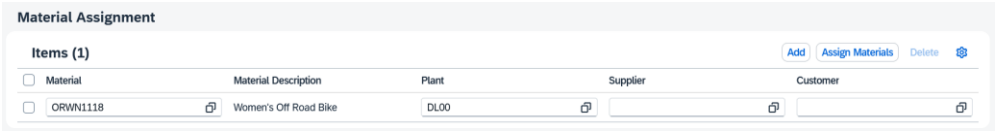

Continue with the *Material Assignment* tab. Click on Assign Materials. Search in the pop-up for the material **ORWN1###***.

ORWN1###*

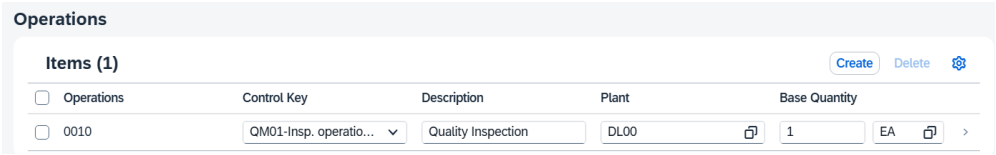

Then please select the **ORWN1###** entry that is assigned to plant **DL00**.

ORWN1###
DL00

Select the *Operations* tab and click on Create. Enter the *control key* **QM01** and the *description* **Quality Inspection** for operation 0010.

QM01
Quality Inspection

Select the row with *operation 0010*, then select the *Characteristics* tab and click on Add.

Enter **Pack** as the *master inspection characteristic* and **Packing OK** as the *inspection characteristic description*.

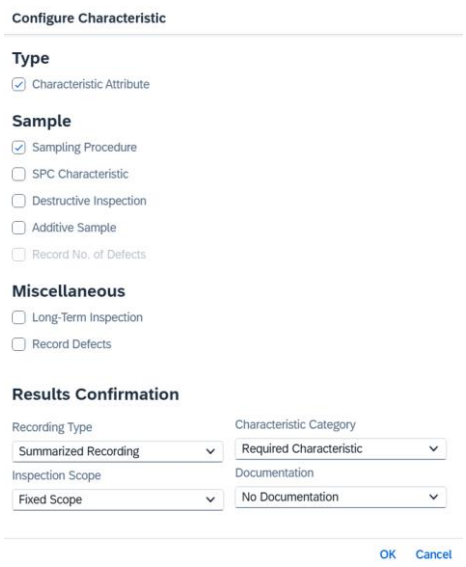

Pack
Packing OK

Click on the *control Indicators* .

Select the checkboxes for *Characteristic Attribute* and *Sampling Procedure* . Ensure that *Summarized Recording* and *Required Characteristic* are selected. Choose *Fixed Scope* and *No Documentation*.

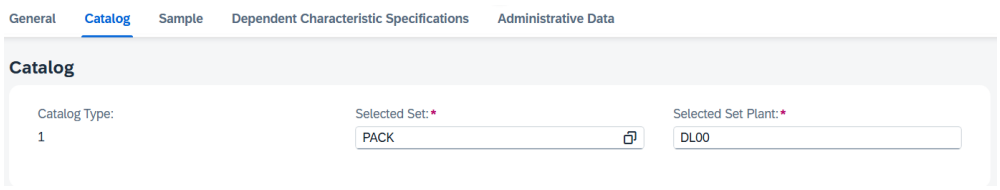

Charac. Attribute
Sampling proc.
Summ.Recording
Required Charact.
Fixed scope
No documentation

Then confirm your selection with OK.

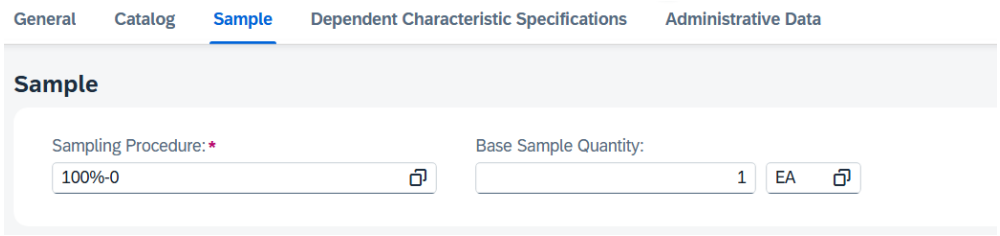

Click on the row *Master Inspection Characteristic PACK*, go to the *Catalog* tab, and select the selected Set **PACK** in plant Dallas.

PACK
DL00

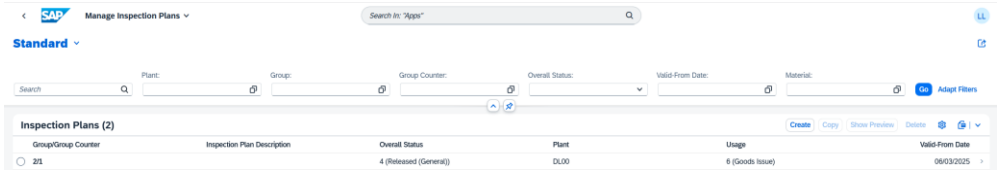

In the *Sample* tab, enter **100%-0** as the *Sampling Procedure*. Additionally, enter **1** as the *base sample Quantity* and **EA** as the *sample unit of measure*.

100%-0

EA

Continue with Save.

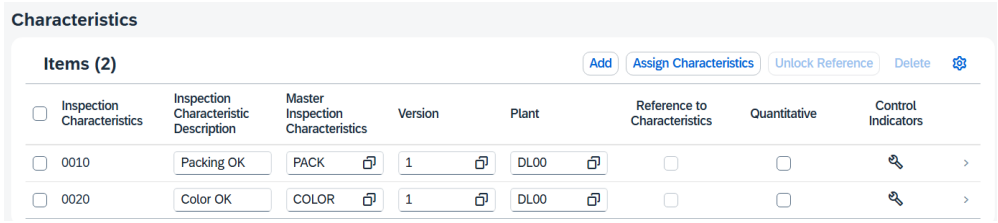

Click on the *Inspection Plan* you created.

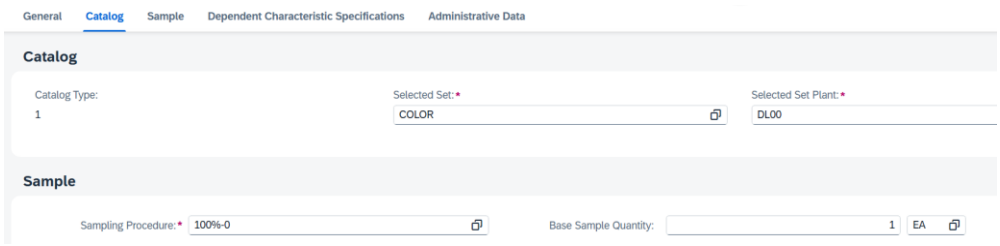

Select Edit.

COLOR
Color OK

Proceed as with the previous steps for *characteristic 0020*, using *Master Inspection Characteristics* **COLOR** and **Color OK** as the *description of the inspection characteristic*.

Make sure to enter **COLOR** as the *selected Set* in the *Catalog* tab. All other data can be used as for characteristic 0010 PACK.

Click on Save to save.

Click on the SAP to go to the Fiori Launchpad Overview.

Step 5: Create Stock Transport Order

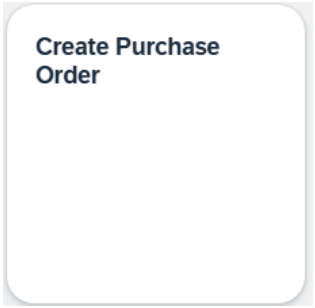

Task Create Stock Transport Order **Time** 10 min

Short Description In this task, you create a Stock Transport Order for 10 Women's Off Road Bike from Dallas to San Diego

Name (Position) Sanjay Datar (Warehouse Supervisor)

To create a stock transport order, click in the *Quality Management* area in the role *Warehouse Supervisor* on the app *Create Purchase Order*.

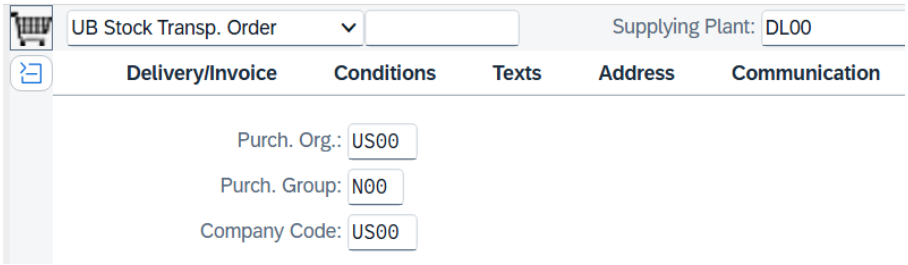

Start

In the *Create Purchase Order* screen, enter **Stock Transp. Order** as Order Type. You will find Order Type next to the shopping cart 

icon. As Supplying Plant choose **DL00**. In the Org. Data tab enter **US00** as Purchase Org., **N00** as Purch. Group and **US00** as Company Code.

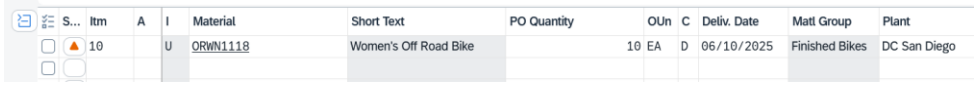

Stock Transp. Order

FG00

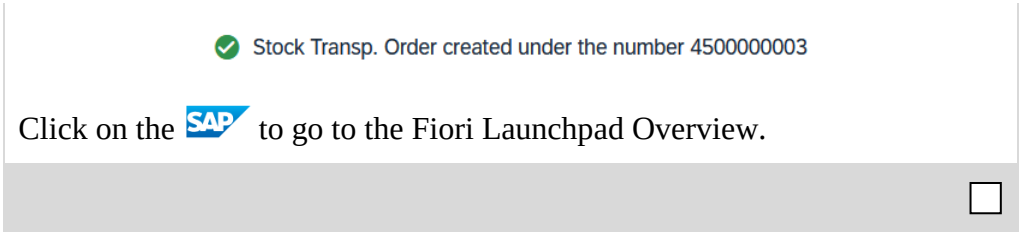

Click on 

to save. Confirm the following popup by clicking on *Save*.

The system wants to make sure that the delivery date can be met.

You will get a message, that your Order is created. Write down the number you will need it in the next step.

Stock Transpnr.
.....

Click on the SAP to go to the Fiori Launchpad Overview.

Step 6: Post Goods Issue

Task Create goods issue **Time** 5 min

Short Description In this task, you ship the materials to San Diego by posting goods issue.

Name (Position) Juriko Hamada (Good Issue Clerk)

Posting goods issue reduces the inventory quantities and value in Dallas.

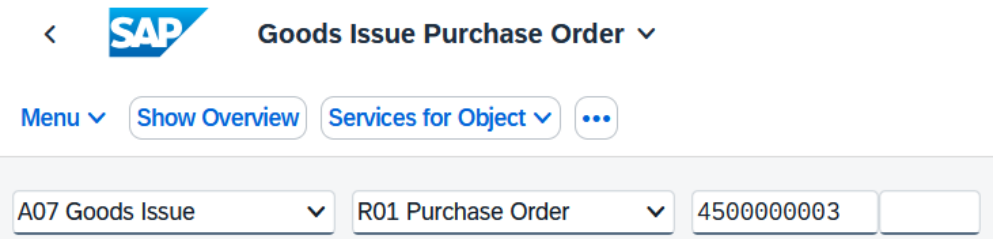

To post a goods issue, click in the *Quality Management* area in the role *Good Issue Clerk* on the app *Post Goods Movement*.

Start

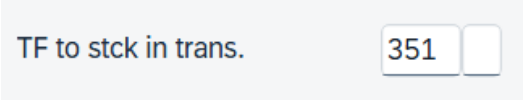

In the following Screen choose **Goods Issue** and **Purchase Order**. Enter in Purchasing Document Number **your Stock Transport Order Number** right to Purchase Order.

Goods Issue
Purchase Order
Order Number

Enter *Movement type* **351**. You will find the box to fill in on the top right of the screen. Proceed with *Enter*.

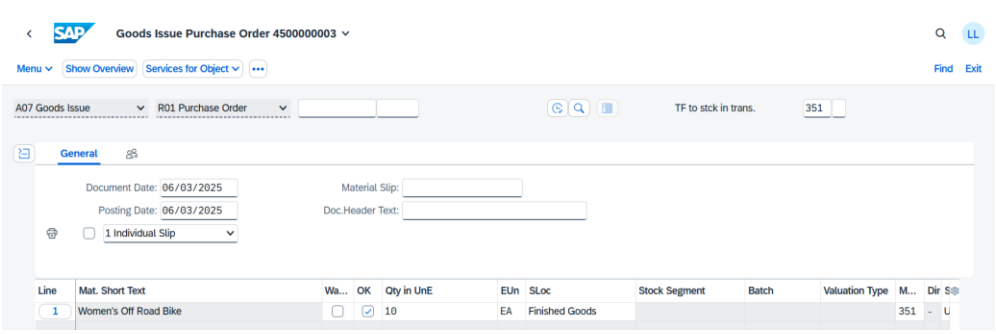

351

Your data from the stock transport order is copied to the line item section. Enter **FG00** as Storage Location and mark your line with the 10 Women's Off Road Bikes as **OK**. If the *"Detail Data"* section is active you have to make your entries there or close the section with a click on .

FG00

Check - OK

Click on Post. You will receive the following message:

Click on the SAP to go to the Fiori Launchpad Overview.

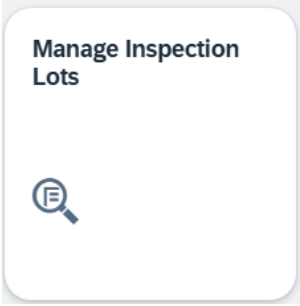

Step 7: Display Inspection Lot

Task Display the Inspection Lot. **Time** 5 min

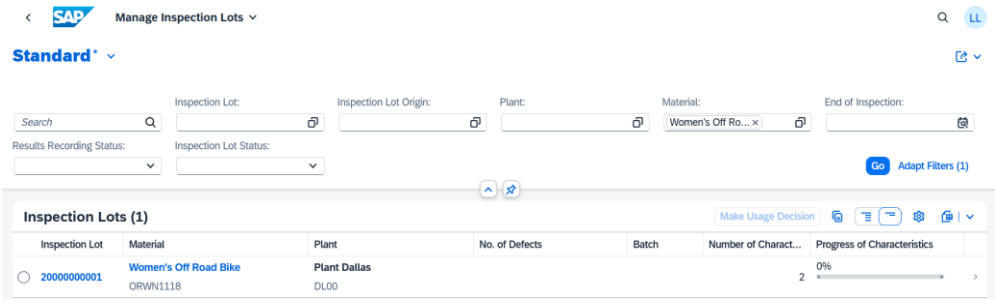

Short Description In this task, you Display the Inspection Lot, which is created for the inspection.

Name (Position) Juriko Hamada (Good Issue Clerk)

To display the created inspection lot, click in the *Quality Management* area in the role *Good Issue Clerk* on the app *Manage Inspection Lots*. Start

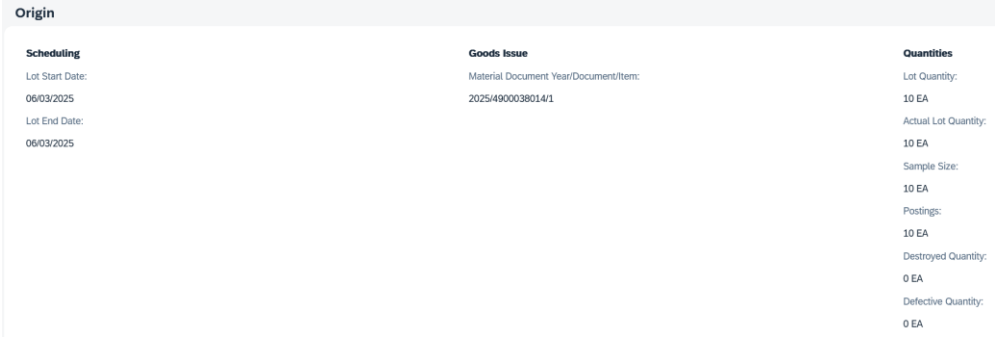

In *Manage Inspection Lots* enter the **material number (ORWN1###)** in the *material field*. Click on Go. ORWN1###

You will see a row with the details of the inspection lot. Click on the row to maintain further details.

In the *Origin* tab, you will find the source that created the inspection lot. In this case, you will find the previously created material document. You will also find information about the lot Quantity and the sample size.

Also check the other tabs for further information about the inspection lot.

Click on the home icon  to go to the Fiori Launchpad Overview.

Step 8: Perform Inspection and Record Results

Task Perform the inspection and recording of the results **Time** 5 min

Short Description In this task, you perform the inspection, you record the results, and you make the usage decision for the inspection lot.

Name (Position) Juriko Hamada (Good Issue Clerk)

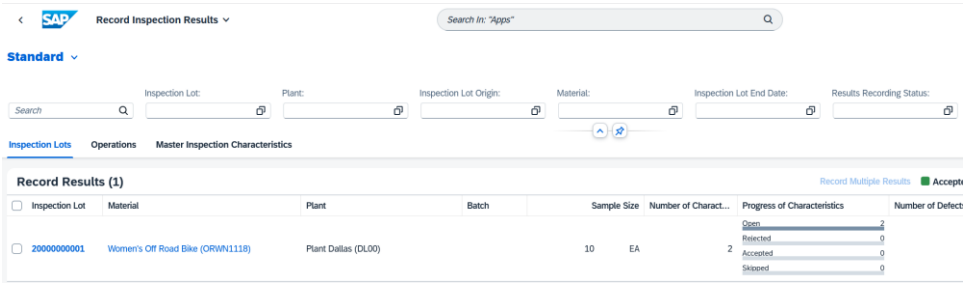

To perform the inspection, click in the *Quality Management* area in the role *Good Issue Clerk* on the app *Record Inspection Results*.

Start

In the *Record Inspection Results* Screen enter the Number of your Inspection Lot. Click on Go.

Inspection Lot Number

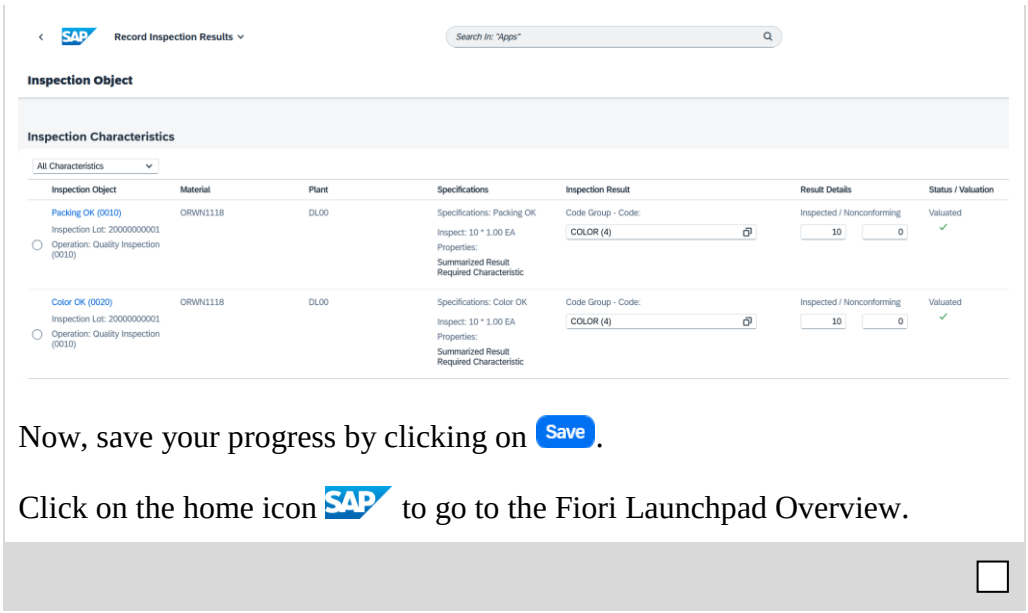

Select your Inspection Lot and click on Record Multiple Results.

Click on Edit. Select the *code group* **COLOR** with the *code* **4** (green) for both inspection objects using the value help symbol. Then enter **10** as *Inspected* and **0** as *Nonconforming* for both inspection objects.

COLOR - 4

10
0

The status should change to *Valuated*.

Now, save your progress by clicking on Save.

Click on the home icon to go to the Fiori Launchpad Overview.

Step 9: Make Usage Decisions of Inspection Lots

Task Make Usage Decisions on Inspection Lots

Time 5 min

Short Description In this task, you make usage decisions on the inspected lots that you performed in the previous step

Name (Position) Juriko Hamada (Good Issue Clerk)

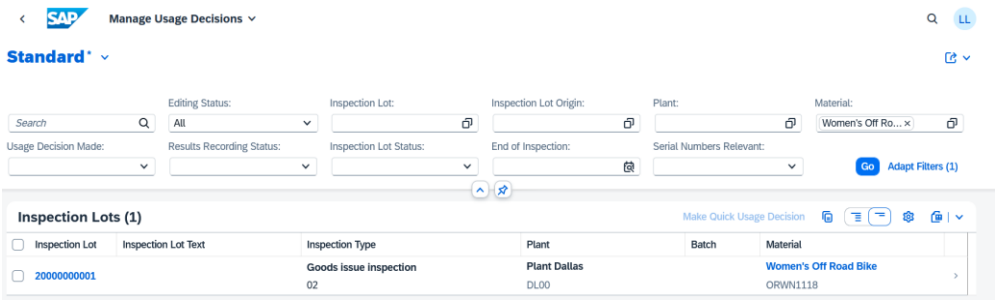

To perform the usage decision, click in the *Quality Management* area in the role *Good Issue Clerk* on the app *Manage Usage Decision*.

Start

On the *Manage Usage Decisions* screen, select **your inspection lot** and click on Go.

Inspection Lot

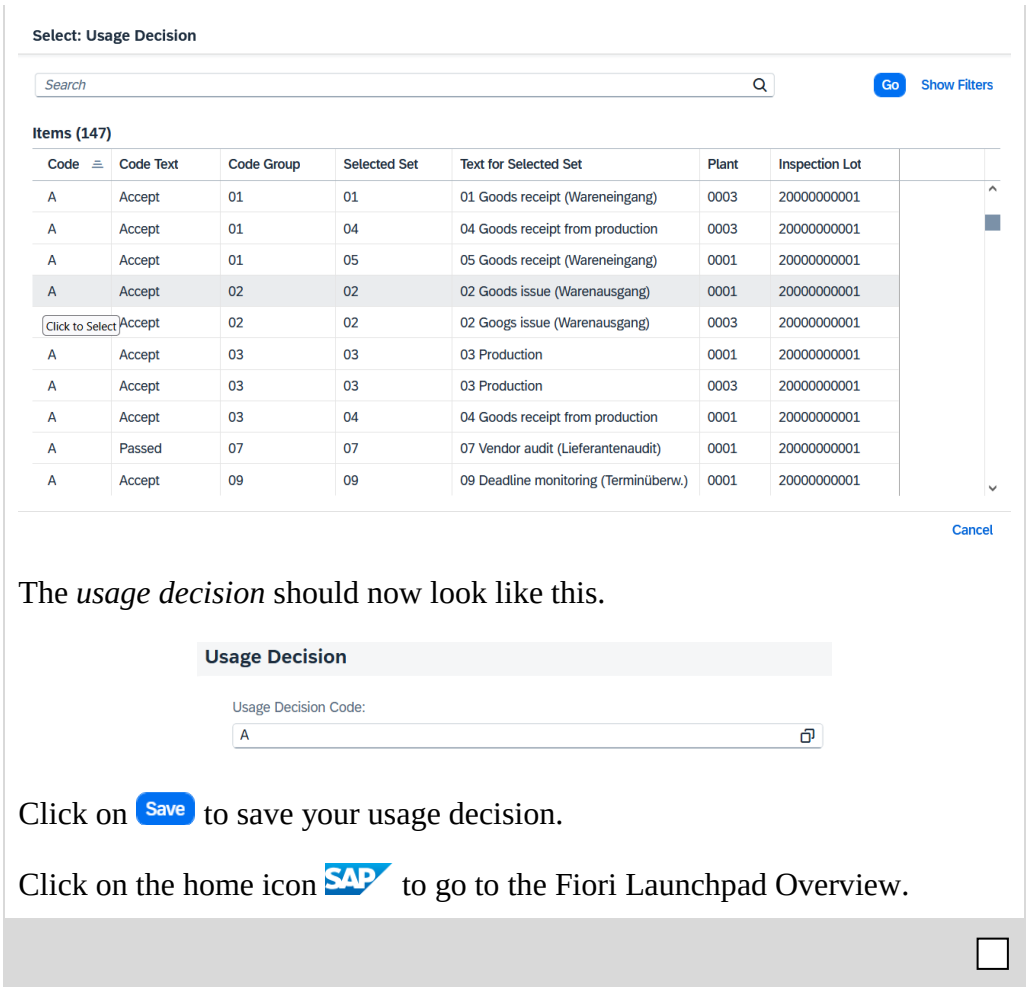

Click on your *inspection lot* to view detailed information.

Click on Edit.

In the *Usage Decision* tab, use the F4 help to find the usage decision code for **Goods issue** and **Accept** in plant 0001.

Goods issue
Accept

The *usage decision* should now look like this.

Click on Save to save your usage decision.

Click on the home icon to go to the Fiori Launchpad Overview.

Step 10: Create Goods Receipt

Task Create Goods Receipts **Time** 5 min

Short Description In this task, you receive the materials into San Diego.

Name (Position) Yoshi Agawa (Goods Receipt Clerk)

To create a goods receipt, click in the *Quality Management* area in the role *Goods Receipt Clerk* on the app *Post Goods Movement*.

Start

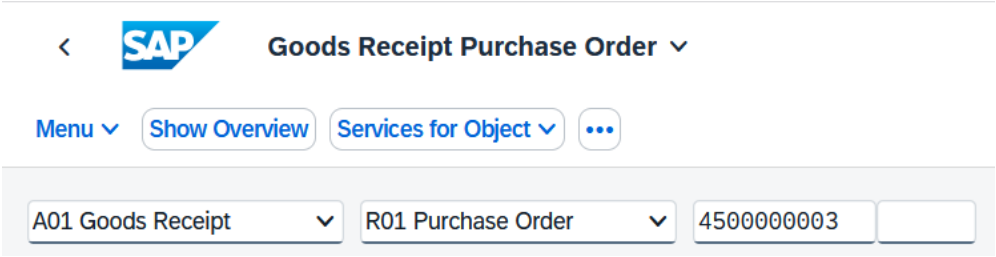

On the follwoing screen change the Trans./Event to **Goods Receipt**. As Reference Document, choose **Purchase Order**. You find both drop down menu on the top right.

Goods Receipt
Purchase Order

Use the F4-Help or to choose your Purchase Order.

Your Purchase Order

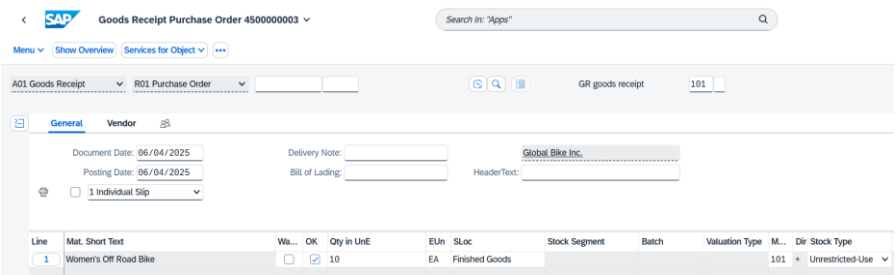

Press *Enter*.

If the Details data is active, close it by clicking on .

Enter the *movement Type* **101** and as *Storage Location* **FG00**. At last select the Item **OK** checkbox.

101
FG00
Item OK

Click on Post. You will receive the following message:

Click on the home icon SAP to go to the Fiori Launchpad Overview.

Step 11: Create Transfer Order

Task Create a Transfer Order **Time** 5 min

Short Description In this task, you create a transfer order for your materials.

Name (Position) Sunil Gupta (Warehouse Employee)

Start

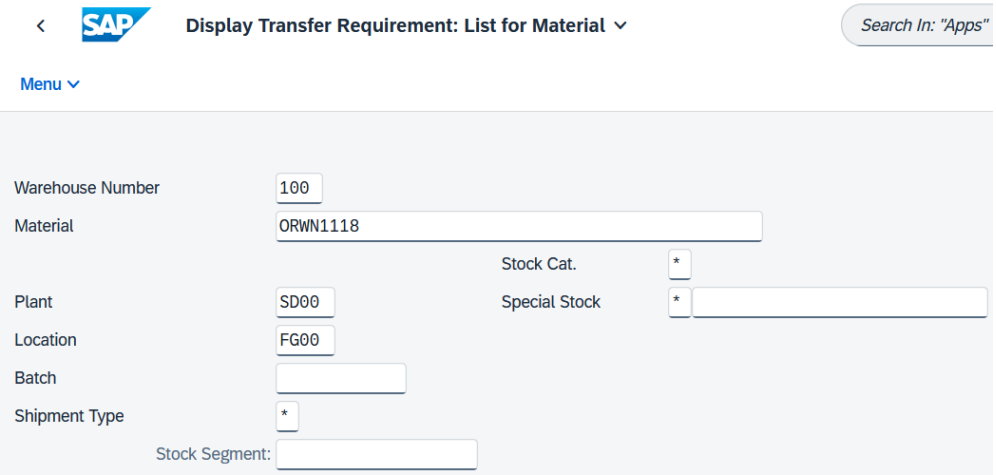

To create a transfer order, click in the *Quality Management* area in the role *Warehouse Employee* on the app *Display Transfer Requirement – List for Material*.

Note If the app is not displayed, search for it by using the search bar .

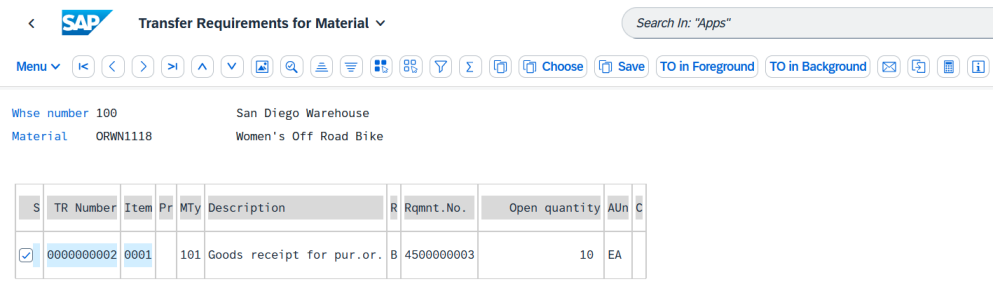

In the *Display Transfer Requirement: List for Material* screen, enter the *Warehouse Number* **100**, the *Material* **ORWN1###**, the *Plant* **SD00** and the *Storage Location* **FG00**.

100
ORWN1###
SD00
FG00

Proceed with *enter*.

In the *Transfer Requirements for Material* screen, select the row with goods receipt for purchase order.

Click on the TO in Foreground icon. In the *Create TO from TR: Prepare for Putaway* screen, press *enter* to copy the *Dest. Target quantity*. Also enter pallet storage **002** as *Type* and total section **001** as *Sec*.

☐	1	10		002	001			☐	

Click on Posting.

Write down your Transfer Order Number you will need it in the next step.

Click on the home icon to go to the Fiori Launchpad Overview.

Step 12: Confirm Transfer Order I

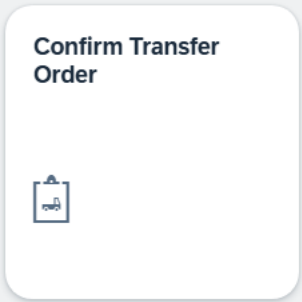

Task Confirm Transfer Order I **Time** 5 min

Short Description In this task, you create a transfer order for your materials.

Name (Position) Sunil Gupta (Warehouse Employee)

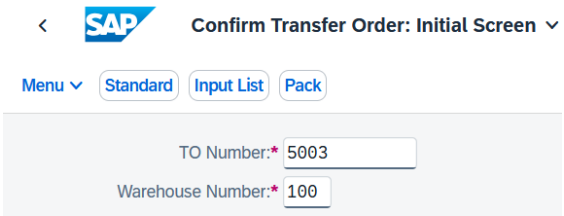

To confirm a transfer order, click in the *Quality Management* area in the role *Warehouse Employee* on the app *Confirm Transfer Order*.

Start

If your Data is not filled in automatically in the screen *Confirm Transfer Order: Initial Screen*, enter for *TO Number* **your Transfer Order Number** for and the *Warehouse Number* **100**.

Your Transfer Order Number
100

Proceed with *Enter*.

On the *Confirm Transfer Order: Overview of Transfer Order Items* screen, click on the Posting icon to post your transfer order. You will receive the following message:

Click on the home icon to go to the Fiori Launchpad Overview.

Step 13: Create Sales Order

Task Create a sales order. **Time** 10 min

Short Description Use the SAP Fiori Launchpad to create a sales order.

Name (Position) Karl Gruber (Sales Person 2 US West)

To create a sales order, click in the *Quality Management* area in the role *Sales Representative US West* on the app *Manage Sales Orders – Version 2*.

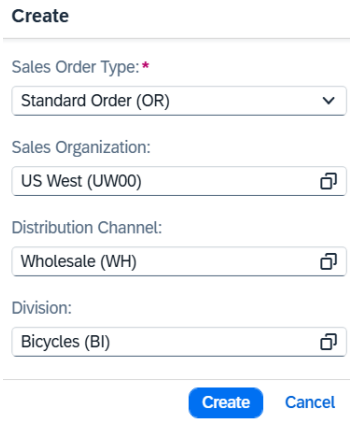

Start

In the *Manage Sales Orders – Version 2* screen, click on Create.

Enter the *Sales order type* **OR**. For organizational data, enter the *sales organization* **UW00**, the *distribution channel* **WH**, and the *division* **BI**.

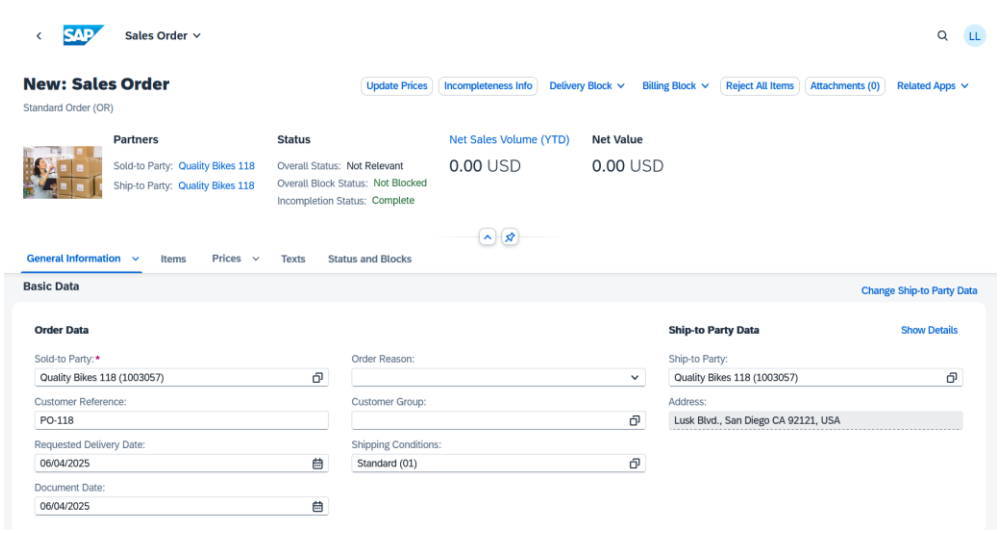

OR
UW00
WH
BI

Then click on Create.

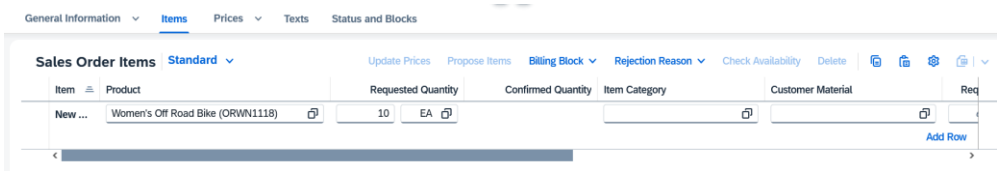

In the *Sales Order* screen, search for **your customer** using the F4 help as the *Sold-to party*. Also, enter **your customer** as the *Ship-to Party*. Enter **PO-###** as the *customer reference*. Enter **today's date** as the *Requested delivery date*.

Your Customer Number
PO-###
today's date

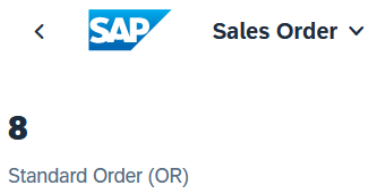

In the *Items* section enter the *Product* **ORWN1###** with an Requested Quantity of **10**.

ORWN1###
10

Confirm your entries with with Create.

Click on the home icon SAP to go to the Fiori Launchpad Overview.

Step 14: Create Outbound Delivery

Task Create an Outbound Delivery. **Time** 5 min

Short Description In this task, you prepare the material for shipment by creating an outbound delivery, which contains the storage location from which the materials will be picked, and the shipping point to which the material will be delivered for shipment.

Name (Position) Zarah Morello (Good Issue Clerk)

To create a sales order, click in the *Quality Management* area in the role *Good Issue Clerk* on the app *Create Outbound Deliveries From Sales Orders*.

Start

In the search mask, enter your **business partner number** in the *Ship-to party* field.

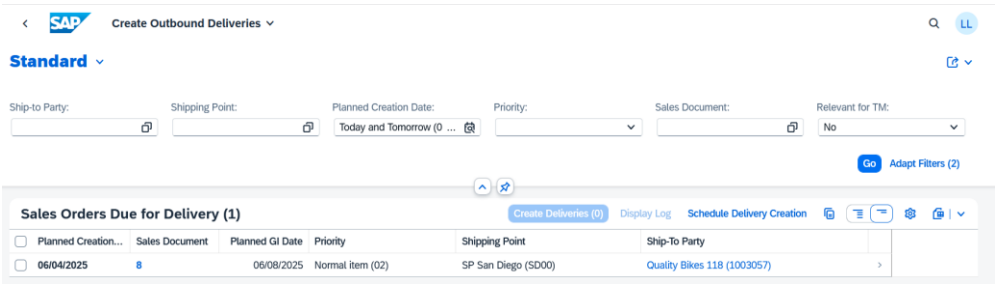

business partner number

Note: Alternatively, if you have forgotten your BP number, click the value help icon in the Ship-to Party field . A pop-up will open. In the Name 1 field, enter *### and San Diego as the City and press Go.

*###
San Diego

Select your customer and accept the entry with OK.

In addition, enter **SD00** as the *shipping point* and remove the *Planned creation date*. Press Go to execute the search. The prepared sales order is displayed.

Select your sales order and choose the button Create Deliveries (1). You will see that the sales order is no longer available. You will receive a confirmation that your outbound delivery has been created.

Click on the home icon to go to the Fiori Launchpad Overview.

Step 15: Change Outbound Delivery

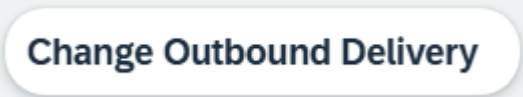

Task Pick material. **Time** 5 min

Short Description Use the SAP Fiori Launchpad to pick materials.

Name (Position) Zarah Morello (Good Issue Clerk)

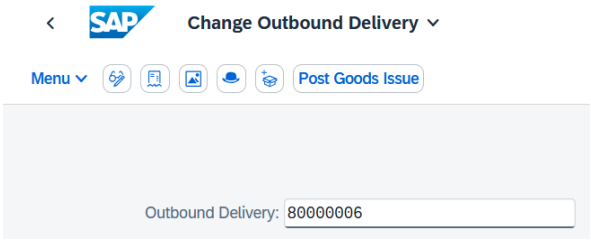

To change the outbound delivery, click the *Change Outbound Delivery* app in the *Quality Management* area in the *Goods Issue Clerk* role.

Start

In the *Outbound delivery* field, enter your **outbound delivery number**.

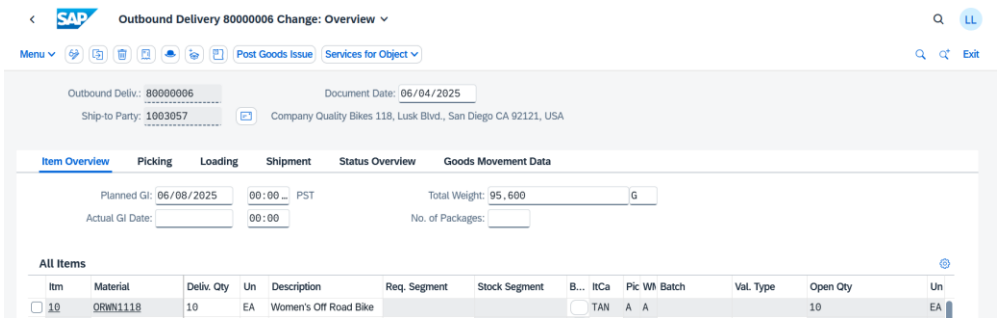

outbound delivery number

Click on Continue.

Select the *picking* area and enter **FG00** as the *storage location*.

FG00

Save your delivery by clicking on Save. Write down your delivery number, you will need it in the following steps.
